

RPA Case Study Manufacturing - Purchase Order Creation

Business Challenges

- The end-to-end process of setting up a field network involved manual operations, timely status updating, invoice processing etc.
- Complete the whole process with speed and security, where the data was collected and updated from independent systems
- The manual process for purchase order creation can be daunting for midsize to large organizations dealing with multiple categories of products

Our Solution

- Implemented Automation edge based RPA solution
- PO creation can be automated enabling 100% accurate and speedy results
- Automated based on a rulebased workflow that takes care of extracting data from independent systems
- Seeking email approval from concerned departmental heads and processing the request of PO generation

Process Automated

- PO creation automated with 100% accuracy
- Data extraction process automated with independent systems
- Approval workflow which seeks through emails
- Process of requesting PO generation
